

Mohammed Atef

ASP.NET Backend Developer

✉ muhamedatef.82@gmail.com ☎ +201093718317 📍 Cairo, Egypt 🔗 LinkedIn 🏠 GitHub

OBJECTIVE

ASP.NET Core Backend Developer with hands-on experience building scalable APIs and business applications using Clean Architecture, DDD, and CQRS. Skilled in designing secure authentication systems, implementing complex domain logic, and developing SQL Server-based solutions with EF Core. Contributed to Microsoft's official ASP.NET Core documentation through open-source contributions.

EDUCATION

Bachelor of Computer and information science
University of Ain Shams
GPA: 3.2

10/2022 – 06/2026

SKILLS

Programming Languages

C#, SQL, JavaScript, TypeScript, Python

Backend Development

ASP.NET Core, Web APIs, Minimal APIs, ASP.NET Core Identity, Authentication & Authorization, JWT, SignalR, Middleware Development

Architecture & Design

Clean Architecture, DDD, CQRS (MediatR), SOLID Principles, Design Patterns, Vertical Slice Architecture

Databases & ORM

SQL Server, Entity Framework Core, Dapper, LINQ

Testing & DevOps

xUnit, Integration Testing, Git, GitHub, GitHub Actions, CI/CD, Docker

Languages

Arabic [Native], English [Upper Intermediate]

OPEN SOURCE CONTRIBUTIONS

ASP.NET Core Official Documentation Contribution (Open Source Contribution)

C# | ASP.NET Core | OpenAPI | GitHub

Contributed to Microsoft's official dotnet/AspNetCore.Docs repository.

- Added a real-world OpenAPI example for handling [AllowAnonymous] endpoints.
- Implemented conditional security logic using a custom IOpenApiOperationTransformer.
- Successfully passed maintainer review and merged into the official documentation repository.
- Contribution: PR #36902

PROJECTS

Hospital Management System (Team Project)

01/2026 – Present

ASP.NET Core 8 Web API | DDD | Clean Architecture | CQRS (MediatR) | EF Core | SQL Server | xUnit

In Progress

A RESTful API for managing hospital operations, including staff, departments, medicine inventory, and internal workflows with role-based access control.

- Developed core modules using Clean Architecture, DDD, and CQRS with clear separation across application layers.
- Implemented Authentication & Authorization using JWT, ASP.NET Core Identity, role-based access control, and admin management features.
- Built Doctor and Department modules with scheduling, business rules, RESTful APIs, EF Core persistence, and domain unit tests.

Smart Logistics & Fleet Management System (Independent Project)

01/2026 – 05/2026

ASP.NET Core Web API | DDD | CQRS (MediatR) | Vertical Slice Architecture | SQL Server | xUnit

An enterprise-grade logistics backend across 10 business domains: fleet, shipments, warehouses, inventory, payments, and insurance claims.

- Designed a rich domain model using DDD principles with Aggregate Roots, Value Objects, Domain Events, and encapsulated business rules.
- Implemented domain event dispatching through EF Core interceptors while keeping auditing and soft deletion isolated within the infrastructure layer.
- Built full auth stack: JWT, Refresh Tokens, TOTP 2FA, token blacklisting, and role/claims-based authorization.
- Wrote domain unit tests (xUnit + FluentAssertions) and enforced layer boundaries with architecture tests (NetArchTest).

Doc2Pod — AI-Powered Egyptian Arabic Podcast Generator (Graduation Project)		11/2025 – 03/2026
.NET 8 Angular FastAPI Clean Architecture Qwen LLM VibeVoice TTS		
Developed an AI-powered platform that converts Arabic PDF documents into Egyptian-Arabic podcasts using asynchronous processing pipelines.		
- Designed and implemented the Authentication & Authorization system using JWT and Role-Based Access Control (RBAC). - Built secure authentication flows including login, registration, refresh tokens, and protected routes across the Angular frontend and .NET backend. - Applied Clean Architecture principles to isolate security concerns and improve modularity and maintainability. - Collaborated on integrating asynchronous processing workflows for podcast generation and delivery.		
E-Commerce Platform (Independent Project)		08/2025 – 11/2025
ASP.NET Core MVC EF Core SQL Server ASP.NET Core Identity Stripe		
Built a full-featured e-commerce platform with layered architecture and secure payment integration.		
- Implemented Repository and Unit of Work patterns for maintainable data access. - Developed product catalog, order management, and admin dashboard features with role-based authorization. - Integrated Stripe payment workflows for secure checkout and order processing. - Improved performance using server-side pagination and optimized database queries		
Movie & TV Streaming Platform (Team Project)		09/2025 – 10/2025
ASP.NET Core MVC EF Core SQL Server Stripe Hangfire Clean Architecture		
Developed the backend of a subscription-based streaming platform supporting movies, series, multilingual content, and recurring subscriptions.		
- Implemented authentication, role-based authorization, user profiles, watchlists, and favorites using ASP.NET Core Identity. - Designed and managed movie, series, episode, and category workflows with EF Core and SQL Server. - Integrated Stripe recurring subscriptions with webhook-based billing and payment lifecycle management. - Developed Hangfire background jobs for recurring tasks and subscription-related operations.		
Educational Courses Platform (Team Project)		08/2025 – 09/2025
ASP.NET Core Web API EF Core SQL Server JWT ASP.NET Core Identity SMTP		
Built a RESTful API platform for managing educational content, enrollments, and instructor workflows.		
- Implemented Authentication & Authorization using ASP.NET Core Identity and JWT. - Developed Courses and Episodes modules with creation, management, and access control features. - Added role-based access control for Students and Instructors. - Integrated SMTP email service for onboarding and password recovery.		
COURSES		
Backend Developer Intern		08/2025 – 09/2025
Information Technology Institute (ITI)		
- Applied C#, OOP, and ASP.NET MVC to build layered web applications with Repository Pattern and unit testing during an intensive 1-month backend track. - Practiced EF Core and LINQ for data modeling and query optimization across multiple hands-on projects.		
VOLUNTEER		
RoboTech ASU Student Activity		10/2025 – Present
President		
- Lead a team of 300+ members. - Founded a new Flutter Committee. - Organize 5 events and cross-university collaborations.		
RoboTech ASU Student Activity		11/2024 – 09/2025
HR Head		
- Organized internal structure for 200+ members. - Coordinated 6 event logistics and team operations. - Conducted 16+ sessions on HR and soft skills topics including CVs, LinkedIn, presentation, and negotiation skills.		
OSC (Open-Source Community)		03/2025 – 05/2025
Science and Tech Vice Head (.NET Instructor)		
- Designed and delivered ASP.NET Core training (REST APIs, EF Core, Clean Architecture) across 10+ sessions for OSC's summer program. - Mentored 10+ junior developers through hands-on projects, leading to backend internship opportunities for several participants.
